|------------------------------------------------------------------------|----------|
| Preface                                                                | vii      |
| Notations                                                              | xi       |
| List of Tables and Figures                                             | xxi      |
| <b>1 A review of Thermodynamics</b>                                    | <b>1</b> |
| 1.1 Internal energy and extensive parameters . . . . .                 | 1        |
| 1.2 Basic postulates of thermodynamics . . . . .                       | 2        |
| 1.3 Fundamental relations and intensive variables . . . . .            | 2        |
| 1.3.1 Fundamental relations . . . . .                                  | 2        |
| 1.3.2 Definition of intensive variables . . . . .                      | 3        |
| 1.3.3 Relativistic vs non-relativistic notation . . . . .              | 4        |
| 1.3.4 Intensive variables in the entropic formulation . . . . .        | 6        |
| 1.3.5 Equations of state . . . . .                                     | 7        |
| 1.4 Connection with intuitive notions of intensive variables . . . . . | 8        |
| 1.5 Consequences of homogeneity . . . . .                              | 9        |
| 1.5.1 Euler relation . . . . .                                         | 9        |
| 1.5.2 Densities . . . . .                                              | 11       |
| 1.5.3 Gibbs-Duhem relation . . . . .                                   | 12       |
| 1.6 Legendre transformations . . . . .                                 | 14       |
| 1.6.1 General introduction . . . . .                                   | 14       |
| 1.6.2 Example from particle dynamics . . . . .                         | 17       |
| 1.7 Thermodynamic potentials . . . . .                                 | 18       |
| 1.7.1 Definition and differentials . . . . .                           | 18       |
| 1.7.2 Extensivity properties . . . . .                                 | 20       |
| 1.8 Maxwell relations . . . . .                                        | 21       |
| 1.9 Heat and work . . . . .                                            | 22       |
| 1.10 More complicated systems . . . . .                                | 24       |
| 1.10.1 Multicomponent systems . . . . .                                | 24       |
| 1.10.2 Systems in external electromagnetic field . . . . .             | 25       |
| 1.11 Thermodynamic relations . . . . .                                 | 28       |
| 1.11.1 Some definitions . . . . .                                      | 28       |
| 1.11.2 Jacobians . . . . .                                             | 30       |
| 1.11.3 Relations . . . . .                                             | 32       |
| 1.11.4 Reactions in equilibrium . . . . .                              | 34       |
| 1.12 Extremum principles . . . . .                                     | 35       |

|          |                                                            |           |
|----------|------------------------------------------------------------|-----------|
| 1.12.1   | The energy minimum principle . . . . .                     | 35        |
| 1.12.2   | Extremum principles for thermodynamic potentials . . . . . | 37        |
| 1.13     | Stability conditions . . . . .                             | 38        |
| 1.13.1   | Concavity of entropy . . . . .                             | 38        |
| 1.13.2   | Convexity of internal energy . . . . .                     | 40        |
| 1.13.3   | Differential relations . . . . .                           | 41        |
| 1.14     | Limitations of thermodynamics . . . . .                    | 44        |
| <b>2</b> | <b>Microstates and macrostates</b> . . . . .               | <b>45</b> |
| 2.1      | Microstates and macrostates . . . . .                      | 45        |
| 2.2      | An example : ideal gas . . . . .                           | 47        |
| 2.3      | States in classical systems . . . . .                      | 50        |
| 2.3.1    | Microstates . . . . .                                      | 50        |
| 2.3.2    | Macrostates . . . . .                                      | 51        |
| 2.4      | States in quantum systems . . . . .                        | 54        |
| 2.4.1    | Microstates . . . . .                                      | 54        |
| 2.4.2    | Density matrix and macrostates . . . . .                   | 54        |
| 2.5      | Entropy in terms of probability density . . . . .          | 58        |
| 2.6      | Density of states . . . . .                                | 62        |
| <b>3</b> | <b>Microcanonical ensemble</b> . . . . .                   | <b>65</b> |
| 3.1      | The distribution function . . . . .                        | 65        |
| 3.2      | A simple 2-level system . . . . .                          | 66        |
| 3.3      | Classical ideal gas . . . . .                              | 68        |
| 3.3.1    | Naïve counting of states . . . . .                         | 68        |
| 3.3.2    | Gibbs paradox . . . . .                                    | 71        |
| 3.3.3    | Correct formula for entropy . . . . .                      | 71        |
| 3.3.4    | Ideal gas in the ultra-relativistic limit . . . . .        | 72        |
| 3.4      | Linear harmonic oscillators . . . . .                      | 74        |
| 3.4.1    | Classical treatment . . . . .                              | 74        |
| 3.4.2    | Quantum mechanical treatment . . . . .                     | 75        |
| 3.5      | Magnetization of spin- $\frac{1}{2}$ particles . . . . .   | 77        |
| <b>4</b> | <b>Canonical ensemble</b> . . . . .                        | <b>79</b> |

# List of Tables and Figures

## List of Tables

|     |                                                                                         |     |
|-----|-----------------------------------------------------------------------------------------|-----|
| 1.1 | Notations for relativistic quantities and their non-relativistic counterparts . . . . . | 5   |
| 7.1 | Riemann zeta function . . . . .                                                         | 134 |

## List of Figures

|      |                                                                          |     |
|------|--------------------------------------------------------------------------|-----|
| 1.1  | Two subsystems, with a wall separating them . . . . .                    | 8   |
| 1.2  | Functions and tangents . . . . .                                         | 14  |
| 1.3  | A gas enclosed in a cylinder with a movable piston . . . . .             | 23  |
| 1.4  | Schematic variation of entropy with energy . . . . .                     | 36  |
| 1.5  | Examples of concave functions . . . . .                                  | 39  |
| 3.1  | Number of states for a given energy . . . . .                            | 66  |
| 4.1  | Sharpness of thermodynamic functions . . . . .                           | 83  |
| 4.2  | Molecular speed distribution . . . . .                                   | 90  |
| 4.3  | Langevin function . . . . .                                              | 95  |
| 4.4  | Brillouin functions . . . . .                                            | 96  |
| 6.1  | Average occupation numbers in an orbital . . . . .                       | 118 |
| 7.1  | Planck distribution . . . . .                                            | 135 |
| 8.1  | Fermi distribution for several temperatures . . . . .                    | 147 |
| 8.2  | Number densities of massless fermions and antifermions . . . . .         | 160 |
| 8.3  | $PV/Nk_B T$ for Bose, Fermi and ideal classical gases . . . . .          | 162 |
| 9.1  | Rotational heat capacity for a diatomic molecule . . . . .               | 168 |
| 9.2  | Vibrational heat capacity for a diatomic molecule . . . . .              | 170 |
| 9.3  | Rotational contribution to the one-particle partition function . . . . . | 173 |
| 9.4  | Rotational heat capacity of molecular hydrogen . . . . .                 | 174 |
| 9.5  | Heat capacity of a crystalline solid . . . . .                           | 176 |
| 9.6  | Heat capacity of an ideal Bose gas . . . . .                             | 182 |
| 10.1 | Ionization at different densities . . . . .                              | 189 |
| 10.2 | Power-law approximations to the pressure of an ideal Fermi gas . . . . . | 190 |
| 10.3 | The relation between mass and radius of a white dwarf star . . . . .     | 192 |
| 10.4 | Proton to neutron ratio in a neutron star . . . . .                      | 198 |
| 11.1 | A concave function and a tangent . . . . .                               | 212 |
| 11.2 | Application of Bogoliubov inequality . . . . .                           | 215 |

|                                                                              |     |
|------------------------------------------------------------------------------|-----|
| 11.3 Mean field approximation of the anharmonic oscillator . . . . .         | 217 |
| 12.1 Induction formula for the configuration integral . . . . .              | 220 |
| 12.2 Excluded volume in a hard sphere gas . . . . .                          | 221 |
| 12.3 Potential energy between two hard spheres . . . . .                     | 224 |
| 12.4 Isotherms of a van der Waals system . . . . .                           | 225 |
| 12.5 Maxwell construction . . . . .                                          | 228 |
| 12.6 Maxwell construction on free energy . . . . .                           | 229 |
| 12.7 Contour for evaluation of the correlation function . . . . .            | 240 |
| 13.1 Seeking for solutions of equations of the form $\tanh x = ax$ . . . . . | 248 |
| 13.2 Pair correlation function for 1-dimensional Ising system . . . . .      | 254 |
| 13.3 Basic cluster for Bethe approximation . . . . .                         | 259 |
| 13.4 Energy and free energy for 2-dimensional Ising system . . . . .         | 263 |
| 13.5 Interparticle potential for the lattice-gas model . . . . .             | 268 |
| 14.1 A small element of volume in the atmosphere. . . . .                    | 275 |
| 15.1 Gibbs free energy and entropy in a first-order transition . . . . .     | 287 |
| 15.2 Gibbs free energy and entropy in a continuous transition . . . . .      | 287 |
| 15.3 Phase diagram for a typical pure substance . . . . .                    | 290 |
| 15.4 Phase diagram for water . . . . .                                       | 293 |
| 15.5 Phase diagram of ammonium chloride and water . . . . .                  | 295 |
| 15.6 Phase diagram of a three-component system . . . . .                     | 295 |
| 15.7 Phase diagram of magnetic systems . . . . .                             | 296 |
| 15.8 Free energy below and above the critical temperature . . . . .          | 317 |
| 15.9 Maxwell construction on the free energy of a magnetic system . . . . .  | 319 |
| 15.10Free energy below and above the critical temperature . . . . .          | 320 |
| 15.11Phase diagram of the transverse Ising model . . . . .                   | 324 |
| 15.12Phase diagram of Ising model in the $J$ - $T$ plane . . . . .           | 325 |
| 16.1 Notation for two-particle scattering . . . . .                          | 329 |
| 16.2 Two particle scattering in the center-of-mass frame . . . . .           | 330 |
| 16.3 Evolution of number density . . . . .                                   | 353 |
