

**EXPERIMENTAL STUDIES ON
PHOTON INDUCED
INNER SHELL IONISATION**

THESIS SUBMITTED
FOR THE DEGREE OF DOCTOR OF PHILOSOPHY (SCIENCE)
OF
JADAVPUR UNIVERSITY

SUMITA SANTRA

SAHA INSTITUTE OF NUCLEAR PHYSICS
1/AF, BIDHANNAGAR
KOLKATA – 700 064
2006

CONTENTS

Chapter 1. Introduction	1
Bibliography	5
Chapter 2. Theoretical development	8
2.1 Inner shell ionisation and the consequent phenomena	8
2.1.1 Introduction	8
2.1.2 Fluorescence, Auger and Coster-Kronig yields	11
2.1.3 Relative Radiative Transition Probabilities	14
2.2 Theory of Photoionisation cross sections	14
2.2.1 Introduction	14
2.2.2 Interaction of photons with the Coulomb field	15
2.2.3 Central Potential Model	18
2.3 Derivation of the expression used to obtain experimental X-ray production cross sections	19
2.4 Relation between X-ray production and ionisation cross sections	22
2.5 Origin of satellite lines	24
2.6 Theoretical formulation of anisotropy parameter	28
2.6.1 Use of density matrix and statistical tensors	28
2.6.2 Angular distribution and polarisation of the emitted X-rays	31
Bibliography	32
Chapter 3. Instrumentation	35
3.1 EDXRF system	35
3.1.1 Photon sources	36
3.1.2 Experimental setup	37
3.1.3 X-ray Detectors	39
3.1.4 Electronics	42
3.1.4.1 The Preamplifier	43

3.1.4.2 The Amplifier	43
3.1.4.3 High Voltage supply	43
3.1.4.4 The Multichannel Analyser (MCA)	44
3.1.4.5 Timing Fast Amplifier (TFA)	45
3.1.4.6 Constant Fraction Discriminator (CFD)	45
3.1.4.7 Delay	46
3.1.4.8 Time to Amplitude Converter (TAC)	46
3.1.4.9 Gate and Delay Generator (GDG)	46
3.1.4.10 Linear Gate and Stretcher (LGS)	47
3.1.5 Theoretical efficiency curve for Si(Li)/HPGe detector	47
3.2 WDXRF system: Curved crystal spectrometer	48
3.2.1 Principle	48
3.2.2 Different types of crystal spectrometer	49
3.2.3 Working Principle of a Curved Crystal Spectrometer	51
3.2.4 Spectroscan-VY Spectrometer	52
3.2.5 Setting of the Curved Crystal Spectrometer	54
Bibliography	59
Chapter 4. Measurement of L sub shell photoionisation cross sections of Th and U at 22.6, 25.8, 29.2 and 32.9 keV	61
4.1 Introduction	61
4.2 Experiment	63
4.3 Analysis	66
4.4 Results and Discussion	72
4.4.1 Fluorescence cross sections	72
4.4.2 Sub shell ionisation cross sections	73
4.5 Comparison of line intensities	81
4.6 Conclusion	83
Bibliography	84

Chapter 5. A novel method of determining the value of the Coster – Kronig parameter (f_{23})	87
5.1. Introduction	87
5.2 Theory	89
5.3 Experimental Details	91
5.4 Data Analysis and Results	92
5.5 Discussion	95
5.6 Conclusion	98
Bibliography	98
Chapter 6. Measurements of the K to L shell vacancy transfer probabilities for Mo, Pd and Cd in photon impact	100
6.1 Introduction	100
6.2 Principle	103
6.3 Experiment	105
6.4 Data Analysis	107
6.5 Discussion	110
6.6 Conclusions	114
Bibliography	114
Chapter 7. Angular distribution of Au and U L X-ray induced by 22.6 keV photons	116
7.1 Introduction	116
7.2 Experiment	118
7.3 Analysis	120
7.4 Results and Discussions	124
7.5 Conclusion	132
Bibliography	132
Chapter 8. K_{α} X-ray satellite of Si and P induced by photons	135
8.1 Introduction	135

8.2 Experiment	136
8.3 Analysis and Results	138
8.4 Discussion	146
8.5 Conclusion	147
Bibliography	148
Chapter 9. SOME APPLICATIONS OF THE EDXRF TECHNIQUE	150
9.1 Analysis of some coins by Energy Dispersive X-ray Fluorescence (EDXRF) and High Energy Particle Induced X-ray Emission (PIXE) Techniques	150
9.1.1 Introduction	150
9.1.2 Treatment of the Samples	151
9.1.3 Measurement	152
9.1.3.1 Energy Dispersive X-ray Fluorescence Analysis	152
9.1.3.1.1 Experiment	152
9.1.3.1.2 Principle	153
9.1.3.1.3 Analysis	156
9.1.3.2 High Energy PIXE Analysis	156
9.1.3.2.1 Experiment	156
9.1.3.2.2 Analysis	158
9.1.4 Results and Discussions	160
9.1.5 Conclusion	162
9.2 Compositional Analysis of fifteen Bronze Statues from Northern West Bengal by the X-Ray Fluorescence (XRF) Technique	162
9.2.1 Introduction	162
9.2.2 Experiment	164
9.2.3 Results and Discussion	166
9.2.4 Conclusion	172
Bibliography	172
Appendix I. Calculation of the relative reflectivity of the PET crystal	175
Bibliography	176

Appendix II. Calculation of the self-absorption correction factor for X-rays excited by <i>bremsstrahlung</i> radiation	177
1 Introduction	177
2 Generation of <i>bremsstrahlung</i>	178
3 Principle	179
4 Selection of layer thickness (d)	180
5 Selection of the width of the energy window (ΔE)	182
6 Results	184
Bibliography	187
List of publications	188
