# CONTENTS

LIST OF ABBREVIATIONS . . . . .	viii
PREFACE . . . . .	ix

## PART I

### Chapter 1: Cryocrystallography of biological macromolecules - a review

1.0	Introduction . . . . .	1
1.1	Radiation damage - the basic problem. . . . .	2
1.1.1	Radiation damage at cryogenic temperatures. . . . .	4
1.2	Why cryocrystallography?. . . . .	5
1.3	Development of cryogenic techniques . . . . .	7
1.4	General principles. . . . .	12
1.4.1	Principle of flash cooling. . . . .	12
1.4.2	Cryoprotectants. . . . .	13
1.5	Methodology. . . . .	14
1.5.1	Choice of a cryoprotectant. . . . .	16
1.5.2	Crystal selection . . . . .	19
1.5.3	Solvent exchange or crystal transfer. . . . .	20
1.5.4	Crystal mounting. . . . .	23
1.5.5	Flash cooling and data collection . . . . .	26
1.5.6	Crystal storage and transport . . . . .	30
1.6	Concluding remarks . . . . .	31

### Chapter 2: An introduction to serine protease inhibitors

2.0	Introduction to Proteases . . . . .	32
2.1	Serine proteases: mechanism of action . . . . .	35
2.1.1	Substrate specificity . . . . .	38
2.2	Protease inhibitors . . . . .	39
2.2.1	Small inhibitors of proteases . . . . .	40
2.2.2	Protein inhibitors of proteases . . . . .	40
2.3	The serine protease inhibitor families. . . . .	40
2.4	Plant serine protease inhibitors. . . . .	46
2.4.1	The Kunitz (STI) family. . . . .	47

2.4.2	Physiological importance of plant inhibitors . . . . .	48
2.4.3	Primary sequences of some Kunitz (STI) family inhibitors . . . . .	48
2.5	Crystal structures of the Kunitz (STI) family of inhibitors . . . . .	50

**Chapter 3: Cryocrystallographic studies of a Kunitz-type winged bean chymotrypsin inhibitor (WCI) protein at 2.13 Å resolution**

3.1	Introduction . . . . .	55
3.1.1	The winged bean . . . . .	55
3.1.2	The Winged bean Chymotrypsin Inhibitor (WCI) . . . . .	58
3.1.3	Three dimensional structure of WCI . . . . .	60
3.1.3.1	The first X-ray structure at 2.95 Å resolution . . . . .	60
3.1.3.2	Refined structure at 2.3 Å . . . . .	60
3.1.4	Why high(er) resolution structure of WCI? . . . . .	61
3.2	Materials and methods. . . . .	62
3.2.1	Isolation, purification and crystallization of WCI . . . . .	62
3.2.2	Data collection at 90K . . . . .	63
3.2.2.1	Crystal soaking for cryocrystallography . . . . .	63
3.2.2.2	Construction of loops . . . . .	65
3.2.2.3	Crystal mounting . . . . .	66
3.2.2.4	Data collection . . . . .	66
3.2.2.5	Quality of the data . . . . .	70
3.2.3	Model building and refinement . . . . .	73
3.2.4	An outline of the refinement programs used . . . . .	76
3.2.5	Details of the refinement . . . . .	79
3.2.5.1	Starting model . . . . .	79
3.2.5.2	Software details. . . . .	80
3.2.5.3	Stage I: Refinement using <i>X-PLOR</i> . . . . .	80
3.2.5.4	Stage II: Refinement using <i>REFMAC</i> . . . . .	83
3.3	Results and Discussions . . . . .	89
3.3.1	Quality of the refined model . . . . .	89
3.3.2	Disordered residues . . . . .	90
3.3.3	Atomic temperature factors . . . . .	90
3.3.4	Overall structure and comparison with similar structures . . . . .	94
3.3.5	Comparison with WCI model at 293K . . . . .	98

3.3.5.1	Crystal packing . . . . .	99
3.3.6	Secondary structural elements . . . . .	101
3.3.6.1	$\beta$ - sheets . . . . .	102
3.3.6.2	$\beta$ - turns. . . . .	104
3.3.6.3	Peptide flip at Ser84-Cys85 . . . . .	106
3.3.6.4	$\beta$ - bulges, $\gamma$ -turns and $3_{10}$ -helices . . . . .	108
3.3.7	Conformation of the two reactive site loops . . . . .	109
3.3.7.1	The first reactive site loop . . . . .	110
3.3.7.2	The second reactive site loop . . . . .	113
3.3.8	Side-chains . . . . .	115
3.3.9	Salt bridges . . . . .	118
3.3.10	Solvent structure . . . . .	119
3.3.10.1	Water molecules . . . . .	119
3.3.10.2	Sulfate ions . . . . .	123
3.4	Conclusion . . . . .	128

**Chapter 4: High resolution (1.9 Å) structure of a recombinant winged bean chymotrypsin inhibitor (rWCI)**

4.0	Introduction . . . . .	130
4.1	Materials and methods . . . . .	132
4.1.1	Crystallization of recombinant WCI. . . . .	132
4.1.2	Data collection at 293 K. . . . .	133
4.1.3	Synchrotron radiation - an overview . . . . .	134
4.1.4	Data collection at the ESRF . . . . .	138
4.1.5	Quality of the data. . . . .	140
4.1.6	Structure refinement. . . . .	142
4.1.6.1	Initial refinement using <i>CNS</i> . . . . .	142
4.1.6.2	Bulk solvent correction procedure in <i>CNS</i> and <i>REFMAC</i> . . . . .	144
4.1.6.3	Refinement using <i>REFMAC</i> . . . . .	145
4.2	Results and Discussions. . . . .	149
4.2.1	Quality of the structure . . . . .	149
4.2.2	A comparison with native WCI structure . . . . .	150
4.2.2.1	The two reactive site loops . . . . .	153

4.2.2.2	Solvent structure . . . . .	155
4.2.3	Structural damage to rWCI produced by synchrotron radiation . . . .	158
4.3	rWCI:enzyme complex - a modeling study . . . . .	160
4.3.1	Mechanism of serine protease inhibition . . . . .	160
4.3.2	Possible interactions of rWCI with chymotrypsin . . . . .	164

## PART II

### Chapter 5: Crystal structure of amino acid derivatives

5.0	Background . . . . .	168
5.1	Crystal structure of D-Phenylglycine hydrochloride. . . . .	168
5.1.1	Introduction. . . . .	168
5.1.2	Experimental. . . . .	170
5.1.3	Results and Discussions . . . . .	174
5.2	Crystal structure of (S)-2-aminoethyl-L-Cysteine hydrochloride . .	179
5.2.1	Introduction. . . . .	179
5.2.2	Experimental. . . . .	179
5.2.3	Results and Discussions. . . . .	185
