PROPERTIES OF HOT NUCLEAR SYSTEMS

THESIS SUBMITTED FOR THE DEGREE OF
DOCTOR OF PHILOSOPHY (SCIENCE)
OF THE
UNIVERSITY OF CALCUTTA

By

SUBRATA PAL

SAHA INSTITUTE OF NUCLEAR PHYSICS
CALCUTTA

MARCH, 1996

CONTENTS

PREFACE iv

1. General Introduction 1

2. Multifragmentation models 23

2.1 Introduction 23

2.2 Dynamical models 24

2.3 Non-thermal statistical models 27

2.4 Thermal statistical models 30

2.4.1 Prompt multifragmentation models 30

2.4.2 Sequential binary decay model 34

2.5 Formulation of the statistical multifragmentation models 36

2.5.1 Sequential binary decay model 36

2.5.2 Prompt multifragmentation model 44

2.5.3 Interfragment interaction 54

Appendix A: Evaluation of $I_i(\beta)$ 57

3. Recombination effect in nuclear multifragmentation 59

3.1 Introduction 59

3.2 The models 60

3.3 Results and discussions 61

3.3.1 Sequential binary decay 61

3.3.2 Prompt multifragmentation 65

4. The effect of neighbouring fragments on sequential binary decay 72

4.1 Introduction 72

4.2 The model 74

4.3 Results and discussions 76

4.3.1 Model predictions for a representative system 76

4.3.2 Confrontation with experimental data 87

5. Multifragmentation of exotic nuclear shapes 96

5.1 Introduction 96

5.2 The model 99

5.2.1 Prompt multifragmentation model 99

5.2.2 IMF-IMF correlation function 100

5.3 Results and discussions 103

6. Distinction between multifragmentation mechanisms 116

6.1 Introduction 116

6.2 The models 118

6.2.1 Sequential fission 118

6.2.2 Prompt multifragmentation 119

6.2.3 Sequential evaporation 120

6.2.4 IMF-IMF correlation function 121

6.3 Results and discussions 122

7. Effect of flow on nuclear multifragmentation.....134

7.1 Introduction 134

7.2 The model 138

7.3 Results and discussions 144

8. Thermostatic properties of finite nuclear systems.....152

8.1 Introduction 152

8.2 Theoretical framework 158

8.2.1 The effective interaction 159

8.2.2 The self-consistent density profile 167

8.2.3 Incompressibility of a finite nucleus 174

8.2.4 Neutron evaporation time 176

8.2.5 The level density parameter 178

8.3 Results and discussions 179

Appendix A: Minimisation of the thermodynamic potential 189

9. Summary and Conclusions.....192
