Preface xviii

CHAPTER 1

1. Introduction 1

1.1 Nonlinear Optics 5

1.2 Origin of optical nonlinearity 7

1.2.1 Classical anharmonic oscillator description 7

1.2.1a Noncentrosymmetric Media 10

1.2.1b Centrosymmetric Media 11

1.2.2 Quantum mechanical approach to nonlinear susceptibility..... 21

1.3 Nonlinear optical processes 31

1.3.1 Second-order processes 31

1.3.2 Third-order processes 33

1.4 Resonance character of third-order susceptibility 35

1.4.1 Nonresonant optical effects 37

1.4.2 Resonant optical response 38

1.5 Other mechanisms of nonlinearity 39
1.5.1 Electron delocalization 39
1.5.2 Conformational defects 40
1.5.3 Bandgap renormalization 40
1.5.4 Phase-space filling 41
1.5.5 Optical Stark effect 41
1.5.6 Population redistribution 42
1.5.7 Free carrier effects 43
1.5.8 Photorefractive nonlinearity 43
1.5.9 Thermal nonlinearity 44
1.5.10 Orientational nonlinearity 44
1.5.11 Electrostriction 45
1.6 Device requirements and choice of nonlinear optical materials 45

CHAPTER 2

2. Metal nanocluster glass composite: Novel materials for photonics ⇒ A literature overview 53
2.1 Optical properties of metal nanoparticles 58

CHAPTER 3

3. Ion-Implantation - as a tool for MNCG preparation 66
3.1 Introduction 66
3.2 Sample preparation 70
3.3 Specification of different types of implanter used 74
3.3.1 High current Low energy Danfysic implanter at SINP 74
3.3.2 10 GHz ECR source at NSC 76
3.3.3 1.7 MeV Tandem Accelerator at IGCAR 78

CHAPTER 4

4. Experimental Techniques 81

4.1 Optical Absorption 82

4.2 Rutherford Backscattering Spectrometry 83

4.2.1 Kinematic factor (K) 83

4.2.2 Scattering cross-section 87

4.2.3 Stopping Cross-section 89

4.2.4 Energy straggling 91

4.2.5 Depth profile by backscattering spectrometry 92

4.2.5.1 Energy loss factor and stopping cross-section factor 95

4.2.5.2 Surface energy and mean energy approximations 96

4.2.5.3 Energy loss ratio method 97

4.2.6 Experimental set-up 99

4.2.6.1 Detection system and allied electronics 102

4.2.7 Experimental examples 105

4.2.7.1 Thickness measurement for thin films 105

4.3 Z-Scan Experiment 106

4.3.1 Principle 109

4.3.2 Theoretical formalism 110

4.3.3 Z-Scan Simulations 118

4.3.4 Experimental setup 120

4.3.5 Advantages and disadvantages of Z-Scan 121

4.3.6 Sources of errors and precautions 122

4.4 Antiresonant Ring Interferometric Nonlinear Spectroscopy 123

4.4.1 Theoretical Formalism 126

4.4.2 ARINS Simulations 131

4.4.3 Experimental setup 132

4.4.4 Advantages and disadvantages of ARINS 135

4.4.5 Sources of errors and precautions 136
4.5 Instrumentation related to the experimental setup 136
4.5.1 Stepper motor driver circuit 136
4.5.2 Operative mode of photodiode and required power supply 139
4.6 Data acquisition system and automation 141

CHAPTER 5

5. Experimental results & discussions 146
5.1 Ag-implanted fused silica samples: experimental results 147
5.1.1 Optical absorption studies 147
5.1.2 Rutherford Backscattering Spectrometry 150
5.1.3 Z-Scan Study 152
5.1.4 Antiresonant Interferometric Nonlinear Spectroscopic study 162
5.2 Au-implanted fused silica samples: experimental results 166
5.3 Cu-implanted fused silica samples: experimental results 170
5.4 Ni-implanted fused silica samples: experimental results 174
5.5 Discussions 175

CHAPTER 6

6. Summary and Future scope of works 180
6.1 Summary 180
6.2 Future prospects 182
