

Study of neutralization kinetics in polymer and polymer nanocomposite systems using X-ray Photoelectron Spectroscopy

Thesis submitted to
JADAVPUR UNIVERSITY
for the degree of
DOCTOR OF PHILOSOPHY (SCIENCE)

by

SUBHRANGSU MUKHERJEE
Surface Physics Division
Saha Institute of Nuclear Physics
Kolkata
July, 2010

1	Introduction	1
1.1	Historical perspectives	1
1.2	Mechanisms of charging	2
1.3	Charge neutralization techniques	6
1.4	Our work and the present thesis	16
2	Experimental Techniques	21
2.1	Spin coating technique	22
2.2	X-ray Photoelectron Spectroscopy (XPS)	24
2.3	Transmission Electron Microscopy (TEM)	55
2.4	Ultraviolet-Visible (UV-Vis) Spectroscopy	60
2.5	Fourier Transform Infrared (FTIR) Spectroscopy	63
3	Quantification of differential charging	67
3.1	Introduction	67
3.2	Experimental details	68
3.3	Results and discussion	70
3.4	Conclusion	80
4	Neutralization kinetics: Pure polymer	82
4.1	Introduction	82
4.2	Experimental details	83

4.3	Results and discussion	85
4.4	Conclusion	100
5	Polymer-metal interaction	101
5.1	Introduction	101
5.2	Experimental details	102
5.3	Results and discussion	104
5.4	Conclusion	113
6	Neutralization kinetics: Polymer-metal nanocomposite	115
6.1	Introduction	115
6.2	Experimental details	116
6.3	Results and discussion	121
6.4	Conclusion	140
7	Summary	142
	Bibliography	146
