Synopsis of the work	v
<b>Chapter-1: Introduction</b>	<b>1-21</b>
1.1 Classification of proteases	3
1.2 The serine proteases	3
1.2.1 The mechanism of action of serine proteases	4
1.3 Protease inhibitors	5
1.4 The serine protease inhibitors	7
1.5 The canonical inhibitors of serine proteases	8
1.5.1 The reactive site loop of the canonical inhibitors	10
1.5.2 The scaffold	12
1.5.3 Mechanism of inhibition, in brief	14
1.6 The Kunitz (STI) type serine protease inhibitors	14
1.7 The Winged bean Chymotrypsin inhibitors	16
1.8 Objectives of the present study	18
<b>Chapter-2: Cloning, expression and purification of the scaffold mutants</b>	<b>22-35</b>

2.1	Primer designing for mutagenesis	22
2.2	Site directed mutagenesis by PCR	23
2.3	Cloning of N14A, N14L and N14Q in pGEM-T vector	26
2.4	Subcloning of N14A, N14L, N14Q and N14G in pET28a+ vector for overexpression	28
2.5	Overexpression of the mutant proteins	30
2.6	Purification of the mutant proteins	31
2.6.1	Isolation from the cell lysate through Ni <sup>+2</sup> -NTA column	31
2.6.2	Removal of His-tag with thrombin	33
2.6.3	Size exclusion chromatography using Sephacryl S-100	34

### **Chapter-3: Structural studies on the Asn14 mutants of WCI** **36-57**

3.1	Crystallization of N14G, N14T, N14A and N14Q	36
3.2	Data collection and processing of the WCI mutants	37
3.3	Structure solution and refinement	39
3.3.1	Refinement of the N14G mutant	40
3.3.2	Refinement of the N14A mutant	41
3.3.3	Refinement of the N14Q mutant	42
3.3.4	Refinement of the N14T mutant	43
3.4	Structure analysis of the mutants and overall comparison with native WCI	44
3.4.1	The N14G mutant: Loss of canonical conformation	48

3.4.2	The N14T mutant: The effect of $\beta$ -branching at the 14 <sup>th</sup> position	49
3.4.3	The N14A mutant: Retention of the canonical conformation of the reactive site loop by a smaller spacer	52
3.4.4	The N14Q mutant: Retention of the canonical conformation of the reactive site loop by a bigger spacer	53
3.5	Conclusions	56
<b>Chapter-4: Inhibitory activity of the scaffold mutants</b>		<b>58-64</b>
4.1	Experimental Procedures	58
4.1.1	Assay of Chymotrypsin inhibitory activity of the wild type and mutant WCI	58
4.1.2	Limited proteolysis of the mutant inhibitors by chymotrypsin	59
4.2	Results	60
4.2.1	Residual enzymatic activity of chymotrypsin	60
4.2.2	Limited proteolysis of inhibitors by chymotrypsin	63
4.3	Conclusions	64
<b>Chapter-5: Role of Asn 14 as derived from the structural and biochemical results and its validation by data-base analysis</b>		<b>65-73</b>
5.1	Religation of the scissile peptide bond: role of Asn14 side chain	67

5.2	Role of the Asn residue in religation for other serine protease inhibitors: a database analysis	70
-----	---	----

**Chapter-6: Single mutation at P1 of a chymotrypsin inhibitor changes it to a trypsin inhibitor** **74-82**

6.1	Experimental Procedures	76
6.1.1	Site directed mutagenesis, expression and purification	76
6.1.2	Assay of trypsin inhibitory activity	78
6.1.3	Limited proteolysis of the loop mutants by trypsin	79
6.2	Results	80
6.2.1	Residual enzymatic activity of trypsin in presence of L65R	80
6.2.2	Limited proteolysis of the loop mutants by trypsin	81
6.2	Conclusions	82

**Chapter-7 Structural studies on L65R in its free state and as a complex with trypsin** **83-108**

7.1	Formation of the complex between L65R and bovine pancreatic trypsin	83
7.2	Structure determination of L65R and L65R:BPT complex	86
7.2.1	Crystallization and data collection of L65R and L65R:BPT complex	86
7.2.2	Structure solution and refinement	88
7.3	Analyses of the structures of L65R and L65R:BPT complex	92

7.3.1 Structure of L65R	92
7.3.1.1 Reactive site geometry: comparison with WCI, ETI and STI	93
7.3.1.2 Concerted movement of the scaffolding residue Asn14	94
7.3.2 Structure of the L65R:BPT complex	96
7.3.2.1 Overall structural organization of the complex	97
7.3.2.2 Mode of interactions between L65R and BPT	99
7.3.2.3 Comparison of the reactive site loop	104
7.2 Conclusions	107
