2012

Contents

Abstract i

Acknowledgements ii

1 Introduction 1
- 1.1 Charge Transport in Disordered Systems . . . 3
- 1.2 Survey of different models for nonlinear conduction . . . 5
  - 1.2.1 Variable range hopping under field . . . 7
  - 1.2.2 Effective Temperature Model . . . 9
  - 1.2.3 Multi-step tunneling . . . 12
  - 1.2.4 Poole-Frenkel Effect . . . 14
- 1.3 Literature survey of non-linear conduction in different systems . . . 16
  - 1.3.1 Amorphous and Doped Semiconductors . . . 16
  - 1.3.2 Conducting Polymers . . . 19
  - 1.3.3 Manganites . . . 22
- 1.4 *1/f* Noise in disordered systems . . . 24

2 Experimental methods 29
- 2.1 Sample Preparation and Characterization . . . 29
  - 2.1.1 Carbon Nanofiber . . . 29
    - 2.1.1.1 Principle of electrospinning . . . 29
    - 2.1.1.2 Carbon Nanofiber Preparation and characterization 30
  - 2.1.2 Conducting Polymer synthesis . . . 31
  - 2.1.3 Manganites . . . 32
- 2.2 Noise Measurement Setup . . . 32
  - 2.2.1 System Design: Low noise constant current source . . . 34
    - 2.2.1.1 Design objectives and component choice . . . 34
    - 2.2.1.2 Design, circuit, and working . . . 35
  - 2.2.2 Preamplifier . . . 38
    - 2.2.2.1 Motivation . . . 38
    - 2.2.2.2 Design Modification . . . 39
  - 2.2.3 Results . . . 39

2.2.4 Conclusions . . . 44

3 Universal scaling description of transport in disordered systems: A new Paradigm 45
3.1 Scaling Analysis: Non-linearity exponent . . . 47
3.2 Multi-step indirect tunneling - GM formalism . . . 49
3.3 Illustration of the scaling approach . . . 50
3.4 Analysis and Discussions . . . 53
3.4.1 Non-linearity exponent: Positive vs. Negative . . . 53
3.4.2 Non-linearity exponent: Systematics . . . 55
3.4.3 Field Scale F_o: electrically hard and Soft . . . 59
3.4.4 Microscopic Model . . . 60
3.4.5 An interesting Caveat . . . 61
3.5 Non-linearity exponent: A new tool to predict transport phase transitions ? . . . 62
3.6 Conclusions . . . 66

4 Unified scaling description of field dependent conductance in conducting polymers and manganites 67
4.1 Conducting Polymers . . . 67
4.1.1 Compatibility of the GM-expression with the scaling approach 69
4.1.1.1 Nonlinearity exponent x_T . . . 71
4.1.1.2 Large bias exponent z_T . . . 72
4.2 RESULTS . . . 73
4.2.1 Polypyrrole (powder) . . . 74
4.2.2 PEDOT (powder) . . . 77
4.2.3 Polypyrrole (film) . . . 80
4.2.4 Other systems in literatures . . . 82
4.3 Discussions . . . 86
4.3.1 Field scale F_o and scaling variable . . . 87
4.3.2 Scaling function Φ . . . 90
4.3.3 Nonlinearity exponent x_M . . . 93
4.3.4 Final picture and Issues with the GM-model . . . 96
4.4 Conclusion . . . 99
4.5 Highly doped conducting polymer - PEDOT:PSS junctions . . . 100
4.6 Manganites . . . 103
4.6.1 Results and Discussions . . . 104

5 Flicker noise in disordered systems 112
5.1 Experimental Results . . . 115
5.2 Discussions . . . 120
5.3 Conclusions . . . 123

6 Summary and Conclusions 124
