

Magnetic, magnetotransport and magnetocaloric properties of doped perovskite manganites

Thesis submitted for the degree of

DOCTOR OF PHILOSOPHY (SCIENCE)

in

PHYSICS

by

Kalipada Das

Department of Physics

University of Calcutta

May, 2015

Contents

1	Introduction	1
1.1	Basic introduction of manganites	2
1.1.1	Crystal Structure	3
1.1.2	Crystalline electric field effect	5
1.1.3	John-Teller distortion	5
1.1.4	Double exchange interaction	7
1.1.5	Other interactions in manganite materials	10
1.1.6	Magnetic structures	11
1.1.7	Electron transport properties	14
1.1.8	Colossal magnetoresistance	19
1.1.9	Specific heat	22
1.1.10	Charge Ordering	25
1.1.11	Magnetocaloric effect	26

1.1.12	Magnetic phase diagram of some selected manganites	31
1.2	Conclusion	35
2	Experimental Techniques	37
2.1	Sample preparation technique	38
2.1.1	Sol-gel technique	38
2.2	Sample characterization techniques	39
2.2.1	X-ray diffraction	39
2.2.2	Electron microscopy	41
2.3	Measurement techniques	45
2.3.1	Magnetization measurement by VSM - SQUID (Quantum design)	45
2.3.2	Electric transport and magneto-transport measurement	47
2.3.3	Heat capacity measurement in PPMS (Quantum Design)	50
3	Modification of magnetic and magneto-transport properties in core-shell manganite nanostructures	54
3.1	Introduction	54
3.2	Magnetic and magneto-transport properties of ferromagnetic-charge ordered core-shell nanostructures	56
3.2.1	Sample preparation and characterization	56
3.2.2	Experimental Results and Discussions	60
3.3	Conclusion	67
4	Transport and magneto-transport properties of charge ordered - ferromagnetic nanocomposites	69

4.1	Introduction	69
4.2	Sample preparation and characterization	71
4.3	Experimental Results and Discussions	76
4.4	Conclusion	90
5	Enhancement of magnetoresistance in nanocrystalline of charge ordered compounds	91
5.1	Introduction	91
5.2	Sample preparation and characterization	93
5.3	Experimental Results and Discussion	99
5.4	Conclusion	110
6	Study of Magnetocaloric Effect of Doped Perovskite man- ganites	111
6.1	Introduction	111
6.2	Large Magnetocaloric Effect in $\text{Gd}_{0.5}\text{Ca}_{0.5}\text{MnO}_3$ and $\text{Dy}_{0.5}\text{Ca}_{0.5}\text{MnO}_3$ Compounds	113
6.2.1	Sample preparation and characterization	113
6.2.2	Experimental Results and Discussion	114
6.3	Enhancement of Magnetocaloric Effect in nanocrystalline $\text{La}_{0.48}\text{Ca}_{0.52}\text{MnO}_3$ Compounds	122
6.3.1	Sample preparation and characterization	123
6.3.2	Experimental results and discussion	125
6.4	Large Magnetocaloric Effect near room temperature in poly- crystalline $(\text{La}_{0.7}\text{Y}_{0.3})_{0.7}\text{Sr}_{0.3}\text{MnO}_3$ Compounds	135

6.4.1	Sample preparation and characterization	135
6.4.2	Experimental results and discussion	136
6.5	Conclusion	142
7	Training effect in manganite nanostructures	145
7.1	Introduction	145
7.2	Modification of the training effect in nanocrystalline $\text{La}_{0.46}\text{Ca}_{0.54}\text{MnO}_3$ compound	146
7.2.1	Sample preparation and characterization	148
7.2.2	Experimental results and discussion	149
7.3	Training effect in Charge ordered-ferromagnetic nanocomposites	156
7.3.1	Sample preparation and characterization	157
7.3.2	Experimental results and discussion	157
7.4	Conclusion	168
8	Summary and future scope of works	170
8.1	Summary	170
8.2	Future prospects	172
