Identification of the cellular signaling network which induces cancer cell death in response to certain drugs and natural products.

Thesis Submitted for the Degree of

Doctor of Philosophy (Science)

In Biotechnology

By

Neha Rai

Department of Biotechnology

University of Calcutta

2015

Table of Contents

Abbreviations 1
Synopsis 4
Chapter-1 *Introduction* 6
Introduction 7
1.1. Overview of cancer 7
1.2. Breast Cancer 7
1.3. Breast cancer heterogeneity 8
1.4. Cancer and cell signalling 11
1.5. Akt pathway overview 12
1.6. Akt in breast cancer 13
1.7. Reactive oxygen species 14
1.8. Cell death pathways in cancer chemotherapy 16
1.8.1. Apoptosis 16
1.8.1.1. Intrinsic pathway 17
1.8.1.2. Extrinsic pathway 18
1.8.2. Autophagy 20
1.8.2.1. Phagophore formation 21
1.8.2.2. Atg5-Atg12 conjugation 22
1.8.2.3. LC3 processing 23
1.8.3. Necroptosis 24
1.8.4. Pyroptosis 26
1.9. Cross talk between apoptosis and autophagy 27
1.9.1. Beclin 1 28
1.9.2. Caspases and other proteases. 29
1.9.3. TOR kinase pathways 30
1.10. Anticancer agents modulating programmed cell death pathways. 32
1.11. Piroxicam 33
1.12. Resveratrol 34
1.13. Resveratrol analogs: the need of the hour 35
1.14. Objective of the thesis 38
References 39
Chapter-2 Materials and methods 47
2.1. Materials 48
2.1.1. Commonly used Buffers/Reagents 48
2.1.2. Mammalian cells 49
2.1.3. Bacterial Strain 50
2.1.4. Plasmid 50
2.1.5. Instruments 50
2.1.6. Antibodies 51
2.1.7. Chemicals/inhibitors 51
2.2. Methods 52
2.2.1 Cell culture and drug treatment 52
2.2.2. Transfection of short interfering RNA (siRNA) and plasmid. 53
2.2.3. Cell Viability and IC_{50} determination by MTT assay. 53
2.2.4. Analysis of ROS. 54
2.2.5. Cell Cycle Analysis. 54
2.2.6. Annexin-V FITC/ PI staining 55

2.2.7. Protein Extraction for Western Blot 55
2.2.8. Western Blot 55
2.2.9. Preparation of polyacrylamide gel 56
2.2.10. Caspase- 3 activity assay. 56
2.2.11. Mitochondrial Membrane Potential. 57
2.2.12. ELISA Apoptosis Detection assay. 57
2.2.13. Preparation of competent cell 58
2.2.14. Transformation of bacterial cell 58
2.2.15. Plasmid isolation 59
2.2.16. GFP-LC3 dot assay 59
2.2.17. Statistical analysis. 59
References 60
Chapter-3 *Result and Discussion*
Part-1: Studies with Piroxicam 61
Results 62
3.1. Px causes cell specific and dose dependent cytotoxicity in MCF-7 cells. 62
3.2. Px increases the intracellular reactive oxygen species (ROS levels) in MCF-7cells. 63
3.3. Px treatment causes upregulation of Akt phosphorylation in MCF-7 cells. 65
3.4. Px induces apoptosis in MCF-7 cells. 67
3.5. Px treatment causes disruption of mitochondrial membrane potential. 69
3.6. Px causes ROS induced Akt activation and apoptosis induction 71
3.7. Akt activation is essential for Apoptosis induction by Px. 73
3.8. Px causes PI3K independent activation of Akt. 77
3.9. Differential effect of H_2O_2 on MCF-7 and MDA-MB-231 78
Discussion 80
References 85
Chapter-4 Part-2 : Studies with Resveratrol and its analog 87
Results 88
4.1. C1 is more potent than Res in breast cancer cell lines 88
4.2. Res and C1 induces cell death through apoptosis in breast cancer cells. 91
4.3. Res induces autophagy in breast cancer cell lines but analog inhibits autophagy. 94
4.4. Res and C1 mediated apoptosis induction involved differential role of autophagy. 97
4.5. Autophagy preceeds Res and C1 induced apoptosis. 102
Discussion 107
