

**Application of Greener Methods For The
Radiochemical Separations of Clinically
Relevant Copper, Zinc, Cadmium And
Indium Radioisotopes**

**Thesis submitted for the degree of Doctor of Philosophy
(Science)
in
Chemistry**

**By
Kaustab Ghosh**

**University of Calcutta
December, 2014**

Contents

Acknowledgements	i
Contents	iii
List of Abbreviation	v
Chapter 1: Introduction	1
1.1 Criteria of a radioisotope to be clinically relevant	2
1.2 Some important applications of NCA radioisotopes of copper, zinc, cadmium and indium	3
1.3 Green separation processes: Need for the society	5
1.4 Scope and approach of the thesis	6
1.5 Organization of the thesis	7
Chapter 2: Understanding production and identification of radionuclides	9
2.1 Methods of production of no-carrier-added (NCA) radioisotopes	9
2.2 Charged particle activation	10
2.3 Accelerators used in the production of radioisotopes	12
2.4 Methods of detection of radioisotopes	15
Chapter 3: Brief literature review on production and separation of Copper, Zinc, Cadmium and Indium radioisotopes	20
3.1 Literature review on the production of radioisotopes of Cu, Zn, Cd and In	20
3.2 Literature review on separations of radioisotopes of Cu, Zn, Cd and In	32
Chapter 4: Production of clinically relevant radioisotopes of copper, zinc, cadmium and indium	41
4.1 Production of radioisotopes of copper and zinc in ^7Li irradiated $^{\text{nat}}\text{Co}$ target	41
4.2 Production of ^{109}Cd and ^{111}In in α -particle irradiated natural Ag target	45

4.3	Production of radioisotopes of indium and tin in α -particle irradiated natural cadmium target	48
Chapter 5: Radiochemical separations of copper and zinc radioisotopes		50
5.1	Separation of no-carrier-added ^{61}Cu , ^{62}Zn from ^7Li irradiated cobalt target using RTIL1-butyl-3-methylimidazolium hexafluorophosphate	50
5.2	Separation of no-carrier-added ^{62}Zn from ^7Li irradiated cobalt target using calcium alginate beads	55
Chapter 6: Radiochemical separations of cadmium and indium radioisotopes		60
6.1	Separation of no-carrier-added ^{111}In and ^{109}Cd from α -particle induced silver target	60
6.2	Separation of no-carrier-added ^{109}Cd from natural silver target using Room Temperature Ionic Liquids (RTILs)	71
6.3	Separation of no-carrier-added $^{113,117\text{m}}\text{Sn}$ and $^{113\text{m},114\text{m}}\text{In}$ from α -particle irradiated natural cadmium target using HDEHP	82
Chapter 7: Summary and conclusion		87
