

Theoretical study of low dimensional systems

Moitri Maiti

*Theoretical Condensed Matter Physics Division,
Saha Institute of Nuclear Physics, 1/AF, Bidhannagar, Kolkata 700064*

Thesis submitted for the Degree of
Doctor of Philosophy in Science (Physics)
Jadavpur University, Jadavpur, Kolkata, India
2009

Contents

Acknowledgments	v
List of Publications	vii
1 Introduction	1
2 Basics of Graphene	10
2.1 Introduction	10
2.2 Energy Dispersion	12
2.3 Helicity and Klein paradox	15
2.4 Andreev Reflection	18
3 Spin Hall Effect	22
3.1 Introduction	22
3.2 Chiral triplet superconductors	25
3.2.1 Edge states	25
3.2.2 Bulk effective action	29
3.3 Graphene	34
3.3.1 Bulk effective action	35
3.3.2 Edge states	41
3.4 Discussion	43
3.5 Conclusions	44
4 Tunneling Conductance	46
4.1 Introduction	46
4.2 Calculation of tunneling conductance	47

4.3	Results	54
4.3.1	Qualitative Discussions	54
4.3.2	Numerical Results	57
4.4	Experiments	60
4.5	Conclusions	61
5	Josephson Effect	63
5.1	Introduction	63
5.2	Josephson current for tunnel SBS junctions	67
5.3	Thin barrier limit	74
5.4	Experiments	78
5.5	Conclusions	79
	Bibliography	84
