Study of Charge Density Wave Transition in Electron-Phonon Interaction Models

Sanjoy Datta

Theoretical Condensed Matter Physics Division,
Saha Institute of Nuclear Physics, 1/AF, Bidhannagar, Kolkata 700064

Email: sanjoy.datta@saha.ac.in

Thesis submitted for the Degree of
Doctor of Philosophy in Science (Physics)
Jadavpur University, Jadavpur, Kolkata, India
2009

List of Publications **ix**

Preface **x**

1 INTRODUCTION **1**

1.1 Peierls Transition 2

1.2 Charge Density Wave Physics 5

1.3 One-dimensional CDW systems 12

1.4 Higher-dimensional CDW systems 14

1.5 Coexistence of CDW and superconductivity 14

1.5.1 Supersolidity 15

1.6 Luttinger Liquid 17

1.7 Bosonization 19

1.8 Anisotropic Heisenberg Model 23

1.9 Modified Lanczos Method 24

Bibliography **28**

2 Electron-Phonon Interaction Models **29**

2.1 Fröhlich Hamiltonian 30

2.2 Holstein Hamiltonian 33

2.2.1 Lang-Firsov Transformation 34

2.2.2 Charge density wave transition in the Holstein Hamiltonian 36

Bibliography **38**

3 Peierls instability in the SOHM in the anti-adiabatic regime 39
3.1 Effective polaronic Hamiltonian 40
3.2 Luttinger liquid to CDW transition 43
3.3 Results and discussions 44

Bibliography 53

4 Peierls instability in the SOHM in the adiabatic regime 54
4.1 Phonon softening in the LL phase 55
4.2 Half-filled case 57
4.3 Less than half-filling 61
4.4 T=0 phase diagram at non-half-filling 63

Bibliography 67

5 Quantum phase transition in Bose-Holstein model 68
5.1 Effective Hamiltonian 70
5.2 Mean field analysis 71
5.3 Diagonal long range order and structure factor 76
5.3.1 $J_2 = 0$ 77
5.3.2 $J_2 \neq 0$ 79
5.4 Off-diagonal long range order 81
5.4.1 Condensate fraction 82
5.4.2 Superfluid fraction 83
5.5 Energy consideration 84
5.5.1 $J_2 = 0$ 84
5.5.2 $J_2 \neq 0$ 84
5.6 Results and discussions 86

Bibliography 97

6 Conclusions and future prospects 98

100

A Lang-Firsov Transformation 101

B **103**

B.1 103

B.2 104

B.2.1 The set of degenerate states for half-filled case 104

B.2.2 Derivation of energy E_{Φ_n} in the half-filled case 105

B.3 106

B.3.1 The case when $\epsilon_{\vec{k}-\vec{p}} - \epsilon_{\vec{k}} = \epsilon_{\vec{k}-2\vec{p}} - \epsilon_{\vec{k}-\vec{p}} = \omega_0$ 109

B.3.2 When both the solutions exist 109
