

*A Theoretical Study On Quark Gluon Plasma
Formation In Relativistic Heavy Ion Collisions*

Submitted to Jadavpur University in partial
fulfilment of the requirements of the Degree of
Doctor of Philosophy in Physics

Abhijit Sen

Saha Institute of Nuclear Physics

Contents

1	Introduction	7
1.1	References	15
2	QGP Signatures	16
2.1	Kinematic Probes	17
2.2	Photon Production	18
2.3	Dilepton Production	19
2.4	Strangeness Enhancement	20
2.5	J/ψ Suppression	21
2.6	Jet Quenching	21
2.7	Signatures of Chiral Symmetry Restoration	22
2.8	Intensity Interferometry	22
2.9	Few Other Signatures	23
2.10	References	24
3	QGP Evolution	27
3.1	Relativistic Hydrodynamics	27
3.2	One Dimensional Hydrodynamic Flow	30
3.2.1	Landau's Model	31
3.2.1.1	The Limitations	36
3.2.2	The Hydrodynamical Model of Bjorken	37
3.2.3	The Boost Invariant Model	41
3.2.4	A Comparative study	43
3.3	Hydrodynamic Flow with Transverse Expansion	45
3.4	References	53
4	Boltzmann Equation	57
4.1	The Boltzmann Transport Equation	57
4.2	The Distribution Functions	60

CONTENTS

2

4.3	Basic Thermodynamic Quantities and evolution equations	62
4.4	References	64
5	Chemical Equilibration I	65
5.1	Definition of equilibrium	65
5.2	Thermalisation of the Gluon Distribution	66
5.3	Main reactions considered	67
5.4	Deduction of Bjorken's Equation	67
5.5	(1+1)D massless - fermion case	70
5.5.1	Fundamental Quantities from Statistical Mechanics	70
5.5.2	Parton Number Density Evolution Equations	71
5.5.3	Bjorken's Equation	72
5.5.4	The Reaction Rates	73
5.5.5	Plan of work	74
5.5.6	Initial Conditions	74
5.5.7	Results	74
5.6	(1+1)D Massive Fermion Case	76
5.6.1	Fundamental Quantities from Statistical Mechanics	77
5.6.2	Parton Number Density Evolution Equations	78
5.6.3	Bjorken's Equation	79
5.6.4	Parton Equilibration Rates	79
5.6.4.1	Quark-Anti quark Pair Production Rate R_2	79
5.6.4.2	Gluon Multiplication Rate R_3	81
5.6.5	Initial Conditions	83
5.6.6	Results for (1+1)D case with finite quark mass	83
5.7	Evolution in (3+1)D	85
5.7.1	Results in (3+1)D	86
5.7.2	Explanation of the peculiar behavior of radial flow	89
5.8	Comparison with other works	91
5.9	References	92

6.4	Thermodynamic & Statistical Mechanic Treatments	96
6.4.1	Juttner Distribution functions	96
6.5	Basic Quantities obtained from Statistical Mechanics	97

CONTENTS

6.5.1	Obtaining The Baryon Number Conservation Equation . . .	98
6.5.2	The Gluon Number Density Evolution Equation	99
6.5.3	The Quark & Anti-Quark Number Density Evolution Equations	100
6.5.3.1	Quark Number Density Evolution Equation . . .	100
6.5.3.2	Anti-Quark Number Density Evolution Equation	101
6.5.4	Massive Strange Quark Number Density Evolution Equation	102
6.5.5	Getting Bjorken's Equation	103
6.6	Switching to Modified FD/BE Distributions with truncations . .	104
6.6.1	Obtaining Basic Thermodynamic Quantities	105
6.6.2	Gluon Number Density Evolution Equation	106
6.6.3	Modified Baryon Number Conservation Equation	107
6.6.4	Quark and Anti-Quark Number Density Evolution Equations II	107
6.6.4.1	Quark Number Density Evolution Equation . . .	108
6.6.4.2	Anti-Quark Number Density Evolution Equation	108
6.6.5	Strange Quark Number Density Evolution Equation . . .	109
6.6.6	Re derived Bjorken's Equation	109
6.6.7	Obtaining The Partonic Reaction Rates	110
6.6.7.1	The Gluon Multiplication Rate R_3	110
6.6.7.2	The Quark Anti-Quark pair production rate . .	112
6.6.7.3	The Quark flavor changing rate	114
6.7	Results	115
6.8	References	120
7	Conclusion	121
7.1	References	123
