

Positron Annihilation Studies in Molecular Substances with Special Reference to Porous Materials

THESIS SUBMITTED FOR THE DEGREE OF
DOCTOR OF PHILOSOPHY (SCIENCE)
OF
JADAVPUR UNIVERSITY

DHANADEEP DUTTA
SAHA INSTITUTE OF NUCLEAR PHYSICS
KOLKATA

2005

Contents

1	Introduction	1
2	Preliminaries	7
2.1	Positron	7
2.2	Positronium	13
2.3	Formation of the Positronium Atom (Ps)	13
2.4	Ground State of Positronium	15
2.5	Comparison with the Hydrogen Atom	16
2.6	Fine Structure and Hyperfine Splittings	16
2.7	Positronium Annihilation in Vacuum	17
2.8	Lifetime of Positronium in vacuum	19
2.9	Positronium as a Probe in Molecular Substances	20
2.9.1	Positron Annihilation Lifetime	20
2.9.2	Angular Correlation of Annihilation Radiation	21
2.9.3	Doppler Broadening of Annihilation Radiation	21
3	Objective of the Work	25
3.1	Critical Review of Positronium in Molecular Substances	25
3.2	Free Volume Model	26
3.3	Bubble Model	28
3.3.1	Origin of the Bubble Concept	28
3.3.2	Relation between the Annihilation Rate and Bubble Size (<i>Tao-Eldrup</i> model)	29
3.3.3	Development of the Bubble Model	30
3.3.4	The Bubble Model and Angular Correlation Experiments	32
3.3.5	Inadequacy of the Prevalent Bubble Model	33
4	Corrections to the Prevalent Bubble Model of Positronium Annih-	

lation in Liquids	38
4.1 Correction due to Finite Size and Structure of the Positronium:	38
4.2 Correction due to Diffuse Bubble Boundary and Curvature Dependence of surface tension	39
4.3 Results and Discussion	42
5 General Trends of Positronium Pick-off Annihilation in Molecular Substances	48
5.1 Search for Common Features and Discussion of Result	48
6 Experimental Techniques	59
6.1 Positron Source Preparation	59
6.2 The Positron Lifetime Spectrometer:	62
6.3 Lifetime Data Analysis	68
6.3.1 <i>PATFIT</i> Analysis	68
6.3.2 <i>MELT</i> Analysis	70
6.4 Dopplar Broadening Spectrometer	72
6.5 DB Data Analysis	74
6.6 <i>Brunauer, Emmett and Teller</i> (BET) Adsorption Isotherm Method . .	75
6.7 X-Ray Diffraction (XRD) Method	78
6.8 Transmission Electron Microscopic (TEM) Method	79
6.9 Fourier Transform Infra Red (FTIR) Spectroscopy	80
7 Application to the Study of Porous Membrane Material	84
7.1 Aromatic Polyamide Membrane	84
7.1.1 PALS Result	86
7.1.2 FTIR Result	89
7.1.3 X-ray Diffraction Result	90
7.1.4 TEM Result	91
7.2 Heterocyclic Polyamide Membrane	92

7.2.1	PALS Result	93
7.2.2	Low Temperature PALS study	96
7.2.3	FTIR Result	99
7.2.4	X-ray Diffraction Result	100
7.3	Summary of the Polymer Microstructural Study	101
8	Application to Meso-porous Substances	103
8.1	Microstructural Study of Silica Gel by PALS	103
8.1.1	Theoretical Analysis	105
8.1.2	Discussion	109
8.2	Microstructural Aspects of Zeolite Samples	110
8.3	Effect of Temperature on Positronium Annihilation in Silica gel	114
8.3.1	Discussion	116
8.4	Comparative Study through BET and PALS	120
9	Conclusion	129
	Appendices	132
	List of Publications	139
