

CRYSTAL STRUCTURE OF PEANUT LECTIN AT 2.95 Å RESOLUTION

A Thesis

Submitted for the Degree of
Doctor of Philosophy
in the Faculty of Science

By

RAHUL BANERJEE

Contents

ABSTRACT	i
1 LECTINS	1
1.1 INTRODUCTION	1
1.2 FUNCTIONS	2
1.3 APPLICATIONS	3
1.4 PHYSICOCHEMICAL PROPERTIES AND PRIMARY SEQUENCES OF LEGUME LECTINS	5
1.4.1 Physicochemical properties	5
1.4.2 Primary sequences	8
1.5 CRYSTAL STRUCTURES OF LEGUME LECTINS	8
1.5.1 Concanavalin A	8
1.5.2 PSL, Favin and LOLI	10
1.5.3 GS4 and EcorL	11
1.6 METAL AND CARBOHYDRATE BINDING SITES IN LEGUME LECTINS	12
1.7 CRYSTAL STRUCTURES OF NON-LEGUME LECTINS	15
1.8 STRUCTURAL STUDIES ON PEANUT LECTIN AND PLAN FOR FURTHER WORK	17
2 PREPARATION OF HEAVY ATOM DERIVATIVES	19
2.1 INTRODUCTION	19

2.2	PREPARATION OF THE NATIVE CRYSTALS AND AN IODOPHENYL GALACTOSE DERIVATIVE	19
2.3	PREPARATION OF HEAVY ATOM DERIVATIVES BY CONTROLLED SOAKING	21
2.3.1	General considerations	21
2.4	HEAVY ATOM DERIVATIVES OF PNA	24
2.4.1	Platinum derivatives	25
2.4.2	A samarium derivative	25
2.4.3	A gold derivative	26
2.5	SUMMARY	27
3	COLLECTION AND PROCESSING OF INTENSITY DATA	29
3.1	INTRODUCTION	29
3.2	THE AREA DETECTOR SYSTEM	30
3.2.1	Hardware configuration	30
3.2.2	Detector operation	30
3.2.3	Data collection strategy	32
3.3	DATA PROCESSING	33
3.3.1	Location of centroids	34
3.3.2	Autoindexing and refinement	34
3.3.3	Integration of reflections	36
3.3.4	Reducing, sorting and merging data	37
3.3.5	Scaling	37
3.4	NATIVE AND DERIVATIVE DATA SETS OF PNA	38
4	STRUCTURE SOLUTION AND REFINEMENT	40
4.1	INTRODUCTION	40

4.2	DETERMINATION AND REFINEMENT OF HEAVY ATOM PA- RAMETERS	40
4.3	STRUCTURE SOLUTION	45
4.3.1	3.3 Å resolution MIR map	45
4.3.2	Construction of a molecular envelope	46
4.3.3	Identification of symmetry axis	47
4.3.4	The averaged map	50
4.3.5	Interpretation of the averaged and the unaveraged MIR maps using relationships obtained from heavy atom positions	51
4.4	STRUCTURE REFINEMENT	53
4.4.1	General considerations	53
4.4.2	Outline of Hendrickson-Konnert program	54
4.4.3	Details of refinement	57
5	MOLECULAR STRUCTURE OF PEANUT LECTIN	69
5.1	INTRODUCTION	69
5.2	STRUCTURE OF THE SUBUNIT	70
5.2.1	Secondary and tertiary structure	70
5.2.2	Metal binding sites	72
5.2.3	Carbohydrate binding site	73
5.3	QUATERNARY STRUCTURE	76
5.3.1	General principles of protein association	76
5.3.2	The novel quaternary arrangement in PNA	79
5.4	COMPARISON WITH SUBUNIT ARRANGEMENT IN OTHER LEGUME LECTINS	81

5.5	POSSIBLE RATIONALE FOR THE UNUSUAL QUATERNARY STRUCTURAL FEATURES IN PEANUT LECTIN	82
5.5.1	ConA and PNA	83
5.5.2	Possible biological rationale for the open structure in PNA	88
5.6	CONCLUDING REMARKS	90
6	APPENDIX 1	91
6.1	PREPARATION AND X-RAY CHARACTERISATION OF FOUR NEW CRYSTAL FORMS OF JACALIN, A LECTIN FROM AR- TOCARPUS INTEGRIFOLIA	91
7	APPENDIX 2	96
7.1	DERIVATION OF RELATIONSHIPS AMONG THE SUBUNITS IN PNA	96
8	APPENDIX 3	104
8.1	CRYSTAL STRUCTURE OF IODOPHENYL- β -D-GALACTOSE	104
