

EXPERIMENTAL INVESTIGATION ON
SOME LAYERED COMPOUNDS WITH
NON-COLLINEAR MAGNETIC STRUCTURE

THESIS SUBMITTED FOR THE DEGREE OF
DOCTOR OF PHILOSOPHY (SCIENCE)
OF THE
UNIVERSITY OF CALCUTTA

BY
SAURAV GIRI
SAHA INSTITUTE OF NUCLEAR PHYSICS
1/AF BIDHANNAGAR
CALCUTTA - 700 064
1998

Table of Contents

1	Introduction	1
1.1	Introduction	2
1.2	Geometrical frustration	3
1.3	Frustration in real lattice	6
1.3.1	Types of frustrating lattice	8
	A. Two dimensions	8
	B. Three dimensions	10
1.4	Frustration in transition metal fluorides	10
1.4.1	One type of cation with equal J_{ij}	11
1.4.2	Two cations with different types of J_{ij}	11
	A. Strong $M^{2+} - M^{3+}$ interactions (J_{ij})	12
	B. Weak $M^{2+} - M^{3+}$ interactions (J_{ij})	12
	C. One of the two cations in the paramagnetic state below T_N	14
1.4.3	One or two types of cations with structural disorder	14
	A. Random distribution of the cationic sublattice in a crystalline compound	16
	B. Amorphous compound	16
2	Experimental Approach	21
2.1	Different experimental techniques	22
2.2	Susceptibility	24
2.2.1	Dc susceptibility	24
2.2.2	Low field dc susceptibility	27
	A. Field cooled and zero field cooled magnetization below the spin freezing temperature (T_f)	27
	B. <i>FC - ZFC</i> magnetization in presence of domain structure	28
2.2.3	Ac susceptibility	29
	Relaxation times	31
2.3	Nuclear Magnetic Resonance	33

2.3.1	Basic theory of nuclear magnetic resonance	33
2.3.2	Application of NMR in magnetic materials	34
2.3.3	Hyperfine interaction	36
	Magnetic hyperfine interaction	37
	Different types of magnetic interactions	38
2.3.4	Covalency effect and ligand hyperfine interaction	39
	Transferred magnetic hyperfine interaction	41
	Shift parameters, hyperfine coupling constants and covalency parameters	42
2.3.5	Analysis of the powder pattern	46
3	Experimental	52
3.1	Sample preparation	53
3.2	Characterization	53
3.2.1	X ray studies	54
	A. <i>XRD</i> studies in KMnFeF_6 , KCoFeF_6 and KZnFeF_6	54
	B. <i>XRD</i> studies in $\text{KMn}_{1-x}\text{Co}_x\text{FeF}_6$	54
3.2.2	Mössbauer study of KMnFeF_6 , KCoFeF_6 and KZnFeF_6 at room tem- perature	58
3.2.3	Magnetization study	60
3.3	Experimental tools	62
3.3.1	Vibrating sample magnetometer (<i>VSM</i>)	62
3.3.2	Ac susceptometer	63
3.3.3	Flux-type magnetometer	65
3.3.4	Nuclear magnetic resonance (NMR) spectrometer	65
4	Magnetic Susceptibility Measurements in KMFeF_6 ($M = \text{Mn, Co, Zn}$) and the Solid Solution $\text{KMn}_{1-x}\text{Co}_x\text{FeF}_6$	72
4.1	Introduction	73
4.1.1	Interest of the systems	73
4.1.2	Crystal structure of KMFeF_6 and $\text{KMn}_{1-x}\text{Co}_x\text{FeF}_6$	75
4.2	Susceptibility measurements in KMnFeF_6	78

4.2.1	Introduction	78
	A. High field dc susceptibility measurement	78
	B. Neutron diffraction study	80
4.2.2	Results of present investigation	83
	A. Ac susceptibility measurements	83
	B. Low field and high field dc susceptibility measurements	89
4.3	Susceptibility measurements in $KMFeF_6$ ($M = Co^{2+}$ & Zn^{2+})	94
4.3.1	High field dc susceptibility measurements in $KCoFeF_6$	94
4.3.2	Low field ac susceptibility measurements in $KCoFeF_6$	97
4.3.3	Discussions	100
4.4	High field dc susceptibility measurements in the solid solution $KMn_{1-x}Co_xFeF_6$	102
4.5	Conclusions	109
5	^{19}F NMR studies in $KMn_{1-x}Co_xFeF_6$ with $x = 0$ & 1	115
5.1	Introduction	116
5.2	^{19}F NMR studies in $KMnFeF_6$ and $KCoFeF_6$ at room temperature	117
5.2.1	Spectrum analysis	117
	A. Calculation of $\delta\nu_n$	119
	B. Calculation of the electron nuclear dipolar field	119
5.2.2	Shift parameters and intrinsic linewidth	124
5.2.3	Hyperfine coupling constants and covalency parameters	128
	A. $KMnFeF_6$	128
	B. $KCoFeF_6$	130
5.3	^{19}F NMR study at low temperature	132
5.3.1	Spectral features	132
5.3.2	Analysis of the spectrum	136
5.3.3	The behaviour of the shift parameters and linewidth as a function of temperature	140
	A. $KMnFeF_6$	140
	B. $KCoFeF_6$	142

5.3.4	Bulk susceptibility versus isotropic shift	145
5.3.5	The behaviour of linewidth as a function of temperature	148
5.3.6	Discussions	151
5.4	General conclusions	153
