A BIO-MIMICKING APPROCH TO REAL-TIME EDGE-DETECTION AND ITS APPLICATION IN MEDICAL IMAGES

THESIS SUBMITTED FOR
THE DEGREE OF DOCTOR OF PHILOSOPHY (SCIENCE)
OF JADAVPUR UNIVERSITY

KUNTAL GHOSH

MICROELECTRONICS DIVISION
SAHA INSTITUTE OF NUCLEAR PHYSICS
1/AF BIDHANNAGAR, KOLKATA-700064, INDIA

SEPTEMBER, 2006

Contents

1. Introduction 1

2. Fundamental Ideas 11

2.1 Some Preliminary Ideas in Image Processing 11

2.2 A Brief Overview of Human Retina 15

2.3 Receptive Field and Edge Detection 17

3. A New Methodology of Image Enhancement 23

3.1 The Mach Band Illusion in Retrospect 23

3.2 Edge Enhancement by the New Digital Operator 27

4. Low-level Vision and Image Processing 32

4.1 The Non-classical Receptive Field 32

4.2 The Low Level Brightness-Contrast Illusions 35

4.2.1 The Mach Band Illusion 35

4.2.2 The Simultaneous Brightness-contrast Illusion 36

4.2.3 The Grating Induction Illusion 37

4.2.4 The Hermann Grid Illusion 37

4.2.5 The White Effect Illusion 38

4.3 Explanation by ECRF model 39

4.4 The Gestalt Approach and its Limitations 46

4.5 Image Processing with the ECRF Model 50

5. Edge Detection and Non-classical Receptive Field 54

6. A Theory of “Fuzzy” Edge Detection 67

6.1 Extension of the Model 67

6.2 Some Useful Properties of the Proposed Model 71

7. Edge Detection in Noisy Images 85

8. Early Vision and Blind Spot 98

8.1 The Proposed Model for Blind Spot 101

8.1.1 Designing the Proposed Interpolator 103

8.2 Performance of the Proposed Interpolator 105

9. Application of the Proposed Methods in Medical Images 109

9.1 Edge Enhancement of Medical Images 109

9.2 Interpolation in Medical Image Processing 111

10. Schemes for Real-time Analog and Digital Implementation of Our Proposed Filter 121

10.1 The First Silicon Vision Model 121

10.2 Role of Outer Plexiform Layer in Information Processing 122

10.3 Role of Inner Plexiform Layer in Information Processing 125

10.4 The Proposed Hardware Implementation in Analog Domain 127

10.5 Real-time Implementation of Proposed Filter in Medical Ultrasonography with TI DM642 DSP 137

11. Conclusion 140

11.1 Future Directions **142**

Glossary **144**

Bibliography **148**

Appendix
